

WASEEM AL-BUQAI

Back-End Developer | PHP Laravel Developer

Damascus, Syria | waseemalbuqai@gmail.com | +963 992353153 | github.com/Wasem8 |

Portfolio: [Waseem Al-Buqai.me](https://Waseem-Al-Buqai.me)

PROFESSIONAL SUMMARY

Motivated Back-End Developer (PHP/Laravel) with hands-on internship experience building production-grade web applications. Proficient in RESTful API design, MySQL database optimization, and clean architecture following SOLID principles. Experienced with JWT authentication, Firebase Cloud Messaging, Eloquent Observers, and Filament admin panels. Passionate about maintainable, secure, and scalable software solutions.

EXPERIENCE

Back-End Developer Intern

2026

Widespheres · Damascus, Syria

Contributed to the full back-end development of the Syrian League Platform — a professional football tracking application (Web + Mobile) covering matches, standings, players, transfers, and personalized notifications.

- Designed and implemented a JWT-authenticated RESTful API (V1) supporting Guest, Fan, Editor, and Admin roles across web and mobile clients.
- Integrated Social Login (Google/Apple) via Laravel Socialite with token-based auth, auto-creating user profiles on first login.
- Built a Season-aware data architecture as the core context for all entities (matches, standings, stats, transfers), enabling multi-season support with seamless switching.
- Developed a real-time Home Dashboard endpoint aggregating live match status, favorite team data, league standings, top scorers/assisters, latest transfers, and news in a single optimized API call.
- Engineered an automated Standings Engine using Eloquent Observers (MatchObserver) that recalculates team positions — wins, draws, losses, goal difference, points — and tracks trend after each finished match.
- Built a Player Season Stats aggregation system via MatchPlayerStatObserver using raw SQL aggregation (SUM/AVG/COUNT) to maintain running totals for goals, assists, cards, minutes, saves, and evaluation score.
- Implemented a Transfer Logic engine (TransferObserver) managing player team membership on transfer completion, supporting internal transfers, loans, and external club moves.
- Structured a clean API Resource layer (HomeResource, StandingResource, LiveMatchResource, etc.) ensuring consistent and versioned API responses.
- Applied Clean Architecture with Service/Repository patterns separating business logic from controllers across 20+ database tables.

PROJECTS

MMS Backend — Mosque Management System

2026 – Present

Tech Stack: Laravel 13 · PHP 8.4 · MySQL · JWT · nwidart/laravel-modules · Swagger/OpenAPI · Pest

Building a scalable modular backend for managing mosques and their affiliated services, with a focus on clean architecture, multi-language support, and API-driven design. Currently in active development.

- Architected a Modular Monolith using nwidart/laravel-modules, separating concerns into independent modules: User, Mosque, Education, Community, Invitation, and Dashboard.
- Designed and exposed RESTful APIs with full Swagger/OpenAPI documentation (darkaonline/l5-swagger), pre-generated and committed to Git for compatibility with serverless deployment environments.
- Implemented JWT Authentication (tymon/jwt-auth) with role-based access control across all modules.
- Built the Education module including TeacherController for managing teachers and their lesson schedules with advanced filtering and pagination.

- Integrated multi-language support (Arabic/English) via Laravel localization files, enabling fully localized API responses.
- Configured transactional email delivery using Smtplib, with queue-based processing for reliability under load.
- Applied Clean Architecture with Service/Repository patterns, SOLID principles, and PHPUnit/Pest feature and unit tests throughout the codebase.
- GitHub: <https://github.com/Wasem8/mms-backend>

Complaint Management System

2025

Tech Stack: Laravel 12 · MySQL · Firebase FCM · Queue Jobs · JWT

- Architected a scalable Laravel 12 backend supporting 3 user roles and 20+ database tables.
- Designed and exposed 15+ RESTful API endpoints consumed by web and mobile clients.
- Managed concurrent updates using database locks and queued jobs for system stability.
- Integrated Firebase Cloud Messaging for real-time push notifications.
- Established audit logging and complaint lifecycle tracking to improve accountability.
- Applied Clean Architecture, SOLID principles, and Service/Repository patterns.
- GitHub: <https://github.com/Wasem8/complaints-system>

Beauty Center Management System — Vera_Daraa

2025

Tech Stack: Laravel · MySQL · Firebase FCM · Queue Jobs

- Delivered a business management platform handling bookings, invoices, staff, services, and offers.
- Structured role-based access control for 3 distinct roles, improving data security.
- Automated background operations using queues, enhancing system responsiveness during peak usage.
- Enhanced customer engagement via Firebase push notifications and booking alerts.
- GitHub: https://github.com/Wasem8/Vera_Daraa

Job Opportunities Platform

2023

Tech Stack: Laravel · MySQL · Role-Based Authentication

- Built a job marketplace connecting employers with job seekers.
- Implemented advanced search and filtering mechanisms for job listings.
- Managed authentication, authorization, and role-based access control.

TECHNICAL SKILLS

Languages: PHP (8+), SQL/MySQL, HTML, CSS

Frameworks & Libraries: Laravel (8–13), Filament (TALL Stack), Blade, TailwindCSS

APIs & Backend: RESTful API Design, JWT Authentication, Firebase, FCM, Socialite, Queue Jobs, Swagger

Databases: MySQL, Database Optimization, Indexing, Transactions, Eloquent ORM

Testing: Unit Testing, Feature Testing (PHPUnit / Pest)

Tools: Git, GitHub, Docker, VS Code, PHPStorm, Postman, Artisan CLI

Architecture: Clean Architecture, SOLID Principles, MVC, OOP, Design Patterns, Service/Repository Pattern, Modular Architecture

EDUCATION

B.Sc. Software Engineering

2022 – 2026

Damascus University · Damascus, Syria

Final Year Student — Expected Graduation: 2026
